

No Flowers = No Food

Plant native • Mow less (smarter) • Stop spraying • Keep corners wild

The world is in a biodiversity crisis.

Insects are disappearing, and without them, we risk losing our food.

Even small patches of flowers in gardens, schools, or streets make a big difference.

Come in action today!

What you can do:

- **Grow Native Plants:**
Hebe, Manuka, Olearia.
- **Mow Grass Less:**
2-3 times a year, leave 30% long, avoid Oct-Jan.
- **Stop Spaying:**
Weed by hand, use mulch, or plant densely to shade out weeds.
- **Make Shelter Spaces:**
Leave leaf litter, twigs, and logs as nesting spaces.

Roadside before spraying:

Flowering and living vegetation

Roadside after spraying:

Dead grass, litter traps, no habitat

Thank you for supporting local biodiversity!
